The LSG has high level of tissue specificity for lungs and is overexpressed in cancerous tissues. The sequence serves as a diagnostic marker for detecting, monitoring, staging and prognosticating lung cancer. The diagnosis involves comparing levels of LSG in samples obtained from patient and normal control.

The present invention describes M. jannaschii open reading frames from the GC present invention also describes a computer based system CC for identifying fragments of the M. jannaschii genome that are CC means comprising the nucleotide sequences, comprising: (a) data storage by sequence (see AAV21209, AAV21210 and AAV21211), or a nucleotide sequence of the 164976, 58407 or 16550 cc sequence at least 99.9% identical to it; (b) search means for comparing a CC identify a homologous sequence. The method, which is based on whole genome CC in the homologous sequence. The method, which is based on whole genome CC of which consists of 3 physically distinct elements, a large circular CC extra-chromosoma (the 164976 by sequence given in AAV21209), a large circular CC extra-chromosomal element (the 58407 by sequence given in AAV21210), and CC a small circular extra-chromosomal element (the 58407 by sequence given in AAV21210), and CC fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABI30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
 genes from Drosophila

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).

                                                                                                                                                                                                                                                 leukaemia; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                AAI58172 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is the genome sequence of Listeria monocytogenes BGD-e. This sequence and fragments of this sequence are useful for selecting probes and primers for detecting genes in L. monocytogenes and proteins (ABB47297-ABB50149) expressed from the present sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and for biosynthesis and proteins encoded by it are also useful for selecting compounds that monocytogenes and related organisms, and for biosynthesis and proteins encoded by it are also useful for selecting compounds that monocytogenes related diseases. In addition, this sequence and proteins encoded by it are useful in pharmaceutical and vaccines compositions for the treatment or prevention of infections by L. monocytogenes and related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                organisms.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and Alzheimer's, Parkinson's disease, Huntington's diseases, such as lateral sclerosis, and Shy-Drager Syndrome. Other uses include the ActivinyInhibin activity, chemotactic/chemokinetic activity, haemostatic assays for receptor activity, arthritis and inflammation, leukaemias and cassays discorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAX20248 to AAX20402 represent polynucleotide sequences isolated from Borrelia burgdorferi (BD). Products derived from Bb can be used for the detection, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the production of biosynthetic products, e.g. enzymes. Borrelia belongs to a family of motile, spiral-shaped bacteria called Spirochetes. Spiral-shaped bacteria called Spirochetes. Spirochetes are pathogenic in humans and Borrelia causes epidemic and endemic relapsing fever, and Lyme borreliosis, more commonly known as
                                                                                                                                                                                                                                                                                                                                               Drosophila melanogaster genomic polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated Borrelia burgdorferi nucleic acids - used to develop products for the detection, diagnosis, characterisation, prevention and therapy of infections, particularly Lyme disease

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB0187072).

C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cytosine

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               QY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 oncogenes having a sequence taken from 536 (actually 533 since companies having a sequence taken from 536 (actually 533 since companies 408, 458 and 500 are missing from the sequence listing) sequences complementary to (Ss). The nucleic acid may be a complementary to (Ss). The nucleic acid may be a complementary to (Ss) and sequences complementary to (Ss). The nucleic acid may be a compared to a set of probes for detecting the cytosine methylation state and/or single nucleotide polymorphisms and also to be used in an companie of a set of probes associated with CpG dinucleotides e.g. (C cancers and tumours. The probes can also be used in a method for carcers and tumours. The probes can also be used in a method for cascertaining genetic and/or epigenetic parameters for the diagnosis and/or therapy of existing diseases or the predisposition to specific compared to another set of genetic and/or epigenetic parameters, the CC diseases, by analysing cytosine methylations. The parameters may be compared to another set of genetic and/or epigenetic parameters, the CC diseases, by analysing cytosine methylations. The parameters may be compared to another set of genetic and/or epigenetic parameters, the CC diseases, by analysing cytosine methylations. The parameters which care disadvantageous to patients. The present sequence is one of the CC are disadvantageous to patients. The present sequence is one of the CC and genes. Sequences with even numbered Seq ID numbers are the CC complementary sequence of the corresponding odd numbered sequence (e.g. ID and ID), ID 536 and ID 535, except for those whose partner sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and neukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, theumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        3351
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  3411 AAAAATATAATATTCTCCAAAAATTAAATATATCTTTAAAATATAAAAATCCATCTCTAA 3352

                                                                                                                                                                                                                                                                                           The sequence is useful in the prodn. of polypeptides corresp. in at least one specific epitope with the P. falciparum sporozoite antigen N-terminal. These polypeptides are useful in the prodn. of antimalarial vaccines.

The gene, designated, NXY, was isolated from a genebank produced from P. falciparum cells (K1 isolate) screened with antiserum obtained by immunising rabbits with P. falciparum isolate NF54. See also AAQ13728.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                New antimalarial polypeptide(s) - corresp. to specific epitope(s) of the Plasmodium falciparum sporozoite antigen, and are useful as vaccines or to prepare antigens

The LSG has high level of tissue specificity for lungs and is overexpressed in cancerous tissues. The sequence serves as a diagnostic marker for detecting, monitoring, staging and prognosticating lung cancer. The diagnosis involves comparing levels of LSG in samples obtained from patient and normal control.

                                                                                                                                                                  The present sequence represents a human lung cancer specific gene (LSG), and encodes a polypeptide designated Lng104. LSGs are useful in the treatment and diagnosis of lung cancer. The treatment of lung cancer comprises the administration of a molecule which down regulates the expression of an LSG. An immune response can be mounted against a target cell expressing an LSG. Identification of potential therapeutic agents for use in imaging and treating lung cancer which comprises screening molecules for an ability to bind to or decrease expression of an LSG relative to LSG in the absence of the agent where the ability of a molecule to bind to the LSG or decrease expression of the LSG is indicative of the molecule being useful in imaging and treating lung

LSGs are useful in the treatment and diagnosis of lung cancer. The treatment of lung cancer comprises the administration of a molecule which down regulates the expression of an LSG. An immune response can be mounted against a target cell expressing an LSG. Identification of potential therapeutic agents for use in imaging and treating lung cancer which comprises screening molecules for an ability to bind to or decrease expression of an LSG relative to LSG in the absence of the agent where the ability of a molecule to bind to the LSG or decrease expression of the LSG is indicative of the molecule being useful in imaging and treating lung

cc human signal peptide-containing proteins HSPP-1 to HSPP-134. HSPPs have anticancer, anti-inflammatory, antimicrobial, nootropic, hepatotropic, concluding cardiovascular and antiasthmatic activities, and can be used in gene therapy. HSPPs can be used to treat or prevent disorders consisted with decreased activity or function of HSPP. Antagonists of contivity or function of HSPP. Such diseases include cell proliferation control of the control of the cell proliferation control of the control of the cell proliferation cell of the cell proliferation cell of the cell proliferation cell of the cell proliferation cell of the cell proliferation of the cell o

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of detecting the nucleotides or polypeptides in a sample, and methods of identifying compounds which
                                                                                                                                                                                                                                              Tang
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              03-FEB-2000;

CC haematopoiesis regulatory activity; tissue growth activity;

CC immunomodulatory activity; activities; haemastatic, thrombotic or

CC chemotactic or chemokinetic activities; haemastatic, thrombotic or

CC thrombolytic activities; receptor or ligand activities; or may be

CC involved in oncogenesis, cancer cell proliferation or metastasis.

CC Depending on their biological activities, polypeptides and nucleotides of

CC involved in oncogenesis, cancer cell proliferation or metastasis.

CC dispending on their biological activities, polypeptides and nucleotides of

CC conditions, e.g., by protein or gene therapy. Such conditions include

CC conditions, e.g., by protein or gene therapy. Such conditions include

CC cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell

CC disorders), chronic inflammatory conditions (e.g., asthma or arthritis),

CC proliferative retinopathy, atherosclerosis, coronary heart disease,

CC arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal

CC vascular growth. Polypeptides involved with tissue regeneration and

CC vascular growth. Polypeptides involved with tissue regeneration and

CC repair (or nucleic acids encoding them) may be used to promote wound

CC immunomodulatory activities may be used in cell cultures to

CC polypeptides with growth factor activity may be used in cell cultures to

CC promote cell growth. For example, such polypeptides may be used to

CC manipulate stem cells in culture to give rise to neuroepithelial cells

CC that can be used to augment or replace cells damaged by illness.
                                                     that can be used to augment or replace cells damaged by illness, autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a cDNA encoding a novel human polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable activities, and hence potential therapeutic applications. The polypeptides of the invention makes various activities, including cytokine, cell proliferation or cell differentiation activities; stem cell growth factor activity;

                                                                                       The invention provides membrane-bound PRO polypeptides and polynucleotides encoding them. The PRO sequences of the invention were identified based on extracellular domain homology screening. The PRO sequences have homology with proteins including LDL receptors. TIE ligands and various enzymes. The membrane-bound proteins and receptor molecules are useful as pharmaceutical and diagnostic agents. Receptor immunoadhesins, for instance, can be used as therapeutic agents to block receptor-ligand interactions. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. The PRO encoding sequences are useful as hybridization probes, in chromosome and gene mapping and in the generation of antisense RNA and DNA. PRO nucleic acid sequences will also be useful for the preparation of PRO polypeptides, especially by recombinant techniques.
                                                                                                                                                                                                                                                                                                                                                                                                       04-AUG-1998

Sequences AAS45925-AAS46231 represent DNA molecules encoding and PCR primers for PRO polypeptides of the invention. The sequences of the invention can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal and a control sample of normal cells, whereby a higher level of expression in the test sample indicates the presence of a tumour in the mammals include dogs, cats, cattle, horses, sheep,

The polypeptides can bused to stimulate tumour necrosis factor (TNF) alpha release from human blood, when contacted with it. A specific polypeptide can be used to stimulate the proliferation or differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also susceptibility to tumour development, particularly adrenal, lung, colon, preast, prostate, rectal, cervical, or liver tumours, in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders.

                                                                                                                                                                                                                   The present sequence is the coding sequence for a human PRO polypeptide (secreted and transmembrane). The PRO protein, and PRO agonists, PRO antagonists or anti-PRO antibodies are useful for preparation of a medicament useful in the treatment of a condition which is responsive to the PRO protein, agonists, antagonists or anti-PRO antibodies. The PRO protein may also be employed as molecular weight markers for protein electrophoresis. The PRO coding sequence has applications in molecular biology, including use as hybridisation probes, and in chromosome and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Eaton DL,
Grimaldi
                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                       Claim 2;
                                                                                                                                                                                                                                                                                                                                                                                                                                               Eighty four nucleic acids encoding PRO polypeptides, useful in molecular biology, including use as hybridization probes, and chromosome and gene mapping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 08-MAR-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WO200116318-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human PRO842 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            24 -AUG-2000;

                                                                                                                                                                               sequences, and their fragments, can be used as hybridisation probes, in chromosomal and gene mapping, and in the generation of anti-sense RNA and DNA. They may also be used to produce transgenic animals which are used to develop and screen therapeutically useful reagents. The PRO nucleotide and protein sequence can be used for tissue typing and in treating cancer. Anti-PRO antibodies can be used in diagnostic assays. AAR44270 to AAR44470 represent PCR primers and hybridisation probes use in the isolation of human PRO sequences. AAR44407 to AAR65300 represent human PRO polynucleotide and protein AAR65194 to AAR65300 represent human PRO polynucleotide and protein sequences given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               20-JUL-1999

                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes human secreted and transmembrane PRO proteins. The PRO proteins have cytostatic activity. The PRO proteins can be used for targeted delivery of bloactive molecules, such as toxins, radiolabels or antibodies, that cause cell death. PRO nucleotide

                                                                                                                                                                                                                                                 The present sequence encodes a human secretory protein designated TGC-440. TGC-440 has antiinflammatory, nephrotropic, immunomodulatory, virucide, hepatotropic, antiasthmatic and antibacterial activities, and can be used in vaccines. TGC-440 and the polynucleotide sequence encoding it can be used to treat, prevent and diagnose immunological, lung, liver, kidney or gastrointestinal disorders and infectious diseases, such as hepatitis, nephritis, influenza, asthma, pneumonia, pulmonnary hypertension, and Helicobacter pylori infection. An antibody immunospecific for TGC-440 is also useful in the above treatment and diagnosis, and also for quantifying the amount of TGC-440 in a liquid

                                                                                                                                                                                                                     Вþ
                                                                                                                                                                                                                                                                                                                           B
                                                                                                                                                                                                                                                                                                                                                                                                                                  В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ligament and/or nerve tissue growth or regeneration, for wound healing, continued to the continued to the continued to the treatment of wounds, incisions and ulcers. Other uses include in the treatment of central and continued to the contract and ulcers. Other uses include in the treatment of central and continued to the contract and system and neuropathies such as Alzheimer's and peripheral nervous system and neuropathies such as Alzheimer's and the contract and the contract and system and system and cord disorders, head trauma and stroke. The protein may also be used as a contraceptive, and for treating coagulation disorders such as haemophilias. The protein and nucleotide sequences with cadherin activity are useful for treating cancer. Other uses for the protein include for inhibiting the growth, infection or function of, or killing, infectious agents such as bacteria, virus, fungi and other parasites, for effecting bodily characteristics such as height, weight, hair colour, effecting blorhythms or cardiac cycles or rhythms, effecting metabolism, catabolism, anabolism, utilization, storage or elimination of dietary fat, lipid, protein carbonyrate virusing minerals cofference affecting incidence or the contract of the contra

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                antibacterial, virucide, and fungicide activity. The proteins and nucleotide sequences are useful as nutritional sources or supplements and in research. The proteins are useful for treating immune deficience and disorders, which may be genetic or resulting from infections, autoimmune disorders such as multiple sclerosis, systemic lupus erythmatosus, rheumatoid arthritis, and for treating myeloid or lymphocall deficiencies such as anaemias by regulating haematopolesis. The proteins are also useful in compositions for bone, cartilage, tendon, the standard of the such as anaemias by regulating for the such as a such as anaemias by regulating haematopolesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          protein, carbohydrate, vitamins, minerals, cofactors, effecting behavioural characteristics, providing analgesic effects and for hyperproliferative disorders such as psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             represent the proteins and their encoding nucleotide sequences, and sequences AAB34746-B34771 represent fragments of the proteins. Probes for the DNA sequences are represented by sequences AAC59494-7C95956. The proteins exhibit neuroprotective, dermatological, immunosuppressive,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cerebroprotective, haemostatic, vulnerary, cytostatic, antipsoriatic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC inhibition and in vaccines. The NAs and the lung tumour-associated CC diagnosis of diseases associated with their inappropriate expression, CC especially lung cancers. For example, the NAs may be administered to CC treat diseases by rectifying mutations or deletions in a pattent's genome CC that affect the activity of the protein by expressing inactive proteins CC or to supplement the patients own production of (I). Additionally, the CC NAs may be used to produce the lung-tumour associated protein, according CC to standard recombinant DNA methodology. Conversely, antisense NA CC molecules may be administered to down regulate protein expression by CC binding with the cells own genes and preventing their expression. The NA CC and complementary sequences may also be used as DNA probes in diagnostic CC assays to detect and quantitate the presence of similar NA sequences in CC cancer. The (I) may be used as antigens in the production of antibodies CC expression and activity of the protein. AAF68083 to AAF68878 and CC AAB76878 represent human lung tumour protein related CC cucleotide and protein sequences which are used in the exemplification CC of the present invention.

bacterial infections New isolated human genes useful for the diagnosis disorders, immune system and secreted polypeptide(s) they encode and treatment of e.g. cancers, CNS disorders, inflammatory disease and

Claim 4. Page 107; 142pp; English.

The invention relates to 20 novel genes and their fragments (AAV69611 to AAV69630) and corresponding secreted proteins (AAV63931 to AAW83950) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein of gene therapy. Also pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the polynucleotides. Specific uses are based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of central nervous system (CNS) and immune system diseases, reproductive disorders, concerts, congenital malformations, degenerative diseases in testes, placenta, liver, brain and activated T cells, spleen diseases in testes, placenta, liver, brain and activated T cells, spleen This sequence represents a nucleic acid molecule designated Gene 8 from the human cDNA clone HIHCM89 (deposited as clone ATCC 97955 and ATCC 209074) which encodes a secreted human protein. This gene is expressed primarily in lung and to a lesser time pancreatic carcinoma and gall bladder and is useful as reagents for differential identification of tissues in a biological sample. endocrine system or heart diseases, endocrinopathies, endocrine Gene 8 from

```
common secreted proteins expressed in prostate, and encode the proteins of given in AAY1176 to AAY11993 respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The conclete acid sequences can be used for products for diagnosis and continuity. The proteins obtained may have cytokine activity, cell contiferation and differentiation activity, reproductive hormone continuity, tissue growth regulating activity, reproductive hormone continuity, the activity, respector/ligand activity, haemastopoiesis regulating activity, the activity, respector/ligand activity, haemastopy concluded activity, the continuity and continuity, and continuity activity. The products concluded in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter continuity extracellular secretion of a polypeptide can be used for of a polypeptide can be used for concluded into a membrane, or importing a polypeptide into a cell.
    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated prostate-derived nucleic acids - used to develop products which may have cytokine, immune regulatory, haematopoiesis regulating, anti-inflammatory or tumour inhibition activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 1999-153780/13.

TGC-440 and the polynucleotide sequence encoding it can be used to treat, prevent and diagnose immunological, lung, liver, kidney or gastrointestinal disorders and infectious diseases, such as hepatitis, nephritis, influenza, asthma, pneumonia, pulmonary hypertension, and Helicobacter pylori infection. An antibody immunospecific for TGC-440 is also useful in the above treatment and diagnosis, and also for quantifying the amount of TGC-440 in a liquid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  virucide; hepatotropic; antiastnmatic; ancourted hypertension; hepatitis; nephritis; influenza; asthma; pulmonary hypertension; neneumonia; Helicobacter pylori infection; ds.
